## Pangean Technologies adds support for MySQL for Windows and Server Redundancy

New York, N.Y. – April 12, 2006, Pangean Technologies, experts in internal instant communications for the enterprise market, today announced the addition of two key features to its *insta-REACT!* and *insta-RELAY!* products: support for the MySQL for Windows database engine and server redundancy.

By integrating the products with the MySQL for Windows database engine, customers now have two options when selecting which database engine to use with the Pangean solutions. "Having the option of using MySQL for Windows as the database engine with our solutions provides our customers with a low-cost alternative to the Microsoft option that is just as scaleable and robust as SQL Server," said Taa Wongbe, CTO of Pangean Technologies.

With the added support for redundancy, the *insta-REACT!* product now provides added reliability in a streamlined solution that fits within an enterprise's disaster recovery and business continuity strategies.

*insta-REACT!* is a SIP-based product that integrates Presence, Instant Message (IM), Multi-Party Audio Conference, Push to Talk, recording, and many more features on a single GUI interface, providing a unique solution for efficient internal communications that increases user productivity and reduces cost.

"These are features that customers requested and Pangean has delivered. This shows Pangean's dedication to its customers and the concept of providing efficient internal communications to the enterprise market," said Taa Wongbe.

### **About Pangean Technologies**

Pangean Technologies develops and markets innovative, SIP-based VoIP software applications for efficient internal and campus-wide communications for the enterprise market. These cost-effective, open-system solutions leverage an organization's existing IP network by delivering a converged communications service to each user's desktop.
