Pangean Technologies to deliver a VoWiFi Push to Talk solution for PDA devices

New York, N.Y. – May 10, 2006, Pangean Technologies, experts in instant communications for the enterprise market, today unveiled plans to launch Y-Talk, Pangean's VoIP mobility solution for internal instant communications. It is expected to be officially released at the end of June 2006.

Y-Talk is a SIP-based software application that transforms any PDA device running Microsoft Windows Mobile™ 5.0 or Microsoft Windows Mobile™ 2003 into a "Walkie-Talkie" like device using Push to Talk. Enterprises with the need for a ubiquitous solution that increases employee mobility can use Y-Talk for instant communications "on the go".

Based on Pangean's award-winning *insta-REACT!* product, the new solution will combine Voice over IP (VoIP) and Wireless Fidelity (WiFi) technologies to provide Push to Talk on PDA devices for instant communications within a campus network. Unlike telephony soft phones running on PDA devices, Y-Talk will offer a unique solution for enterprises looking to maintain contacts within groups of employees and leverage their existing Wireless LAN network for in-building communications. With the Push to Talk button, employees can instantly communicate with team members and groups of colleagues.

Targeted for hospitals, retailers, warehouses and other environments where internal instant communications and employee mobility is critical, the solution will provide a single interface for presence, push to talk, instant group conference and more.

Pangean has also partnered with Symbol (SBL-NYSE) to integrate Y-Talk on Symbol's MC50 and MC70 Enterprise Digital Assistants (EDA) and expects to receive certification from Symbol.

To find out more about Y-Talk and request an advanced copy of the solution, please visit <http://www.pangeantech.com/ytalk.php>.

About Pangean Technologies

Pangean Technologies develops and markets innovative, SIP-based VoIP software applications for efficient internal and campus-wide communications for the enterprise market. These cost-effective, open-system solutions leverage an organization's existing IP network by delivering converged communications services to each user's desktop.
