Pangean Technologies announces the release of version 3.0 of its IP Public Address (PA) System for Corporate and Emergency Broadcasts

New York, N.Y. – May 17, 2007, Pangean Technologies, experts in instant communications solutions for the enterprise, government, and educational market, today announced the release of *insta-RELAY!*[™], version 3.0, the latest version of its IP Public Address (PA) system.

Unlike traditional, legacy, PA systems which use a hard-wired electronic amplifier, Pangean's IP-based PA solution uses an existing IP network and PC clients to immediately broadcast corporate or emergency information to users via voice channels, with no need for additional hardware. Users can instantly relay urgent information to all the users and PC clients who are tuned into the specified broadcast channel.

The new version of *insta-RELAY!* comes with an enhanced audio component, as well as a redesigned, easier to use, user interface for multi-channel communications. Combined with the Pangean Reflector solution, users in multiple sites across the WAN would be able to instantly receive the voice broadcasts on their PC.

"We believe that utilizing the existing IP network to instantly broadcast urgent information, whether corporate or emergency, via a voice channel, makes for a much more scaleable, cost-effective, and mission critical mechanism than traditional PA systems can provide," said Tarun Kapoor, co-founder and CEO at Pangean Technologies. "Our *insta-RELAY!* solution accomplishes all these tasks and delivers the most effective and efficient means to immediately broadcast corporate and emergency information with the push of a button."

The *insta-RELAY!* solution takes an IP approach to PA systems, utilizing open standards communication protocols, such as SIP and RTP. The system supports instant, full-duplex, and multi-channel communications on a one-to-many and many-to-many basis. Any user with access to the IP network, including remote users (VPN), can immediately receive the audio broadcasts on their PC.

About Pangean Technologies

Pangean Technologies develops and markets innovative, SIP-based, VoIP software solutions for internal and campus-wide communications for the enterprise, government, and educational markets. These cost-effective, open-system solutions leverage an existing corporate IP network by delivering efficient communications services to each user's desktop or handheld device.
