## Pangean Technologies announces its IP paging solution for network-based emergency alerts and “always-on” team communications.

New York, N.Y. – December 6, 2006, Pangean Technologies, experts in instant communications solutions for the enterprise, government, and educational markets, announced today the release of *insta-REACT!*, version 2.0, its next generation IP paging solution for emergency alerts and enhanced team communications.

The solution provides the ability to alert personnel of unforeseen events, including emergencies, corporate announcements, and geographic locations of employees. It utilizes the existing IP infrastructure and standard PCs to provide the voice alerts, in either one to many broadcast mode or one to one private conversations. It also provides instant support communications with the push of a button, increasing the productivity and effectiveness of internal support staff. It is targeted for a wide variety of vertical markets, such as education, military and defense, and large fortune 500 companies, among others. It is currently in use in Mount Olive College, NASA, Boeing, Scientific Research/AT&T Government solutions, and many other enterprises, universities, and government offices.

“Our solution allows for immediate voice alerts when emergency conditions require fast and effective communications,” said Tarun Kapoor, CEO of Pangean Technologies. “The need to leave multiple messages at various locations is eliminated.”

Pangean Technologies’ award winning *insta-REACT!* solution is a SIP-based solution for internal communications which gives employees and project teams the ability to instantly communicate, reducing internal communication costs and increasing employee productivity. It integrates Presence, Push to Talk, Instant Message (IM), Multi-Party Audio Conference, Recording, and many more features on a single, simple user interface, delivering these features across an existing enterprise IP network.

### **About Pangean Technologies**

Pangean Technologies develops and markets innovative, SIP-based, VoIP software solutions for internal and campus-wide communications for the enterprise market. These cost-effective, open-system solutions leverage an existing corporate IP network by delivering efficient communications services to each user’s desktop or handheld device.
